Lab Tests with GYN or Well Visits for Insured Clients

At the Mountain Midwifery Center, Inc we strive to give families the best possible care. At your well woman exam we may recommend screening tests such as a pap smear, or other blood tests to monitor your health. Some testing may be recommended based on your family history or your own health history. If we are seeing you for a problem visit, we may do in-house testing or send samples to a lab to help diagnose a problem. We are unable to determine what your health insurance will or will not cover. We cannot predict what some of these tests may cost. If coverage and cost are a concern, we recommend contacting the lab and your insurance company to inquire what your costs may be. In the event we recommend services of an outside provider or service, such as consult with a specialist, ultrasounds or mammograms, please consult your insurance company to determine participation in your network plan before making the appointment.

I have read and understand the above statement.
